## Hospital Management System (HMS)

Hospital Management System (HMS) is a comprehensive, integrated information system designed to manage all the aspects of a hospital operation, such as medical, administrative, financial, legal and the corresponding service processing.

### In-Patient (IPD)

Upon admission of patient a unique record is generated for each patient and patient details along with the room reservation and its case papers and other details will be stored in the system. And also room Allotment is taken care. Once patient gets a discharge then his check out from hospital along with the billing details will be taken care of by the system.

### Patient Record Maintenance

The system maintains a detail record of each patient who will be admitted to the hospital. The patient case papers will be generated automatically and will be maintained in proper format. Whenever a regular patient will visit hospital his complete diagnosis chart along with case papers will be provided by the system.

### Medicine: (PHARMACY)

The pharmaceutical department is a important element of a hospital. The system keeps track of the inventory. The patient prescription details and wise medicines are stored. The system will inform the user in advance in case of the storage updating and inventory maintenance. The records for each patient and its bill will be maintained by the system and it will be added to the patient bill on discharge.

### Billing System

The entire billing system for the patient will be automatically created. It will include the expenses of all kind and in the end when the patient gets a discharge the entire bill will be generated automatically. The bill will contain all the expenses, which should be charged to the patient for the period for which he was admitted to the hospital. Out Patient Billing is also taken care-of

### Inventory System

The system keeps track of all the inventory of the hospital, which may include various departments such as pharmaceuticals, Hospital Store to name the few. Stock & vendor details are maintained by the system.

### Infrastructure Maintenance

The system keeps a detail record of the existing infrastructure and its record. All the assets and liabilities will be kept well maintained and any addition or removal will be kept updated.

## School Management System (SMS)

Though education is not a business but due to the requirement of fast and accurate information, all major schools prefer to use a computerized system for information processing. Manual system is not very much efficient and accurate and it also takes too much time as compared to the automated system.

SMS is a software product used to maintain Student Information and Fee record. It greatly facilitates the clerical work and provides accurate and fast information to the management. Automated Fee Bills generation with updating of student fee record saves time many folds. A record of class wise paid and unpaid students can be generated any time within seconds.

A photograph of a classroom from the back of the room. Several students are sitting at desks, and many of them have their hands raised in the air. At the front of the room, a teacher is standing near a chalkboard. The scene is brightly lit, suggesting a sunny day.
